000963... 2 x 10^7) will be installed over Germany, the USA, South Korea, Japan, China,... A: I would start with '14 Billion' - a billion seconds (14000 hours) is about three days (14*24*60*60) so 14 billion seconds is about a year and a half. A thousand seconds is about 8 minutes, so about 0.002% of a year and a half is about 30 minutes, which is about the time it would take to get from New York to London by air. That's just a reference point to start with, and really it depends on where they are going and what kind of service they get. The time to get to London might be shorter than that, or a lot longer, depending on whether the plane is empty, and whether there is any turbulence. New York to Paris is about five and a half hours by air, so even if the plane were full, it would still take a while. The average flight speed is about 500 mph, so at that rate they'd be getting from New York to London about 15 miles per hour, or roughly two hours to get there. Then it would take maybe another hour to get from the airport to the city centre, so three hours from landing to arrival. So if they get on the plane at 7am, and it takes about three hours, that means they need to be on the plane by 4pm (airports are usually open until 11pm). I assume the German national airline (Lufthansa) flies from JFK and I bet it takes longer than that to get to JFK, so if they can be on the plane for a little after

6am (7am is ok, but not ideal) and they get to London just after 11am, they'd have about three hours and ten minutes to get to the airport, meet their friends, enjoy the sights, and get on the plane, but the actual flight time might be a little longer. Prevalence of ischemic heart disease in rural California: findings from a population-based study. Ischemic heart disease (IHD) is the leading cause of death and disability in the United States. Our goal was to investigate the prevalence of IHD in a rural population of California. Using the Gold Mine of Los Angeles County (GMoLAC) Project database, we reviewed records of all patients who underwent coronary angi 82157476af
